

a data structure storing the infrastructure-related information that is determined by each of the client systems; and

c/ a selection module determining from the infrastructure-related information stored in the data structure whether a configuration of each client system is capable of processing [the] content, the server [transmitting] selecting [the] content to transmit to each client system [if] based upon the determined capability of that client system [has the determined capability].

REMARKS

This paper is responsive to the Office Action mailed from the U.S. Patent and Trademark Office on July 14, 1999. Claims 2-9, 11-19, 21, 22, and 24-26 were rejected. The Amendment amends claim 17 to more clearly claim the invention. No new matter is added. Claims 2-9, 11-19, 21, 22, and 24-26 remain pending in the application.

Rejection of Claims 2-9, 11-19, 21, 22, and 24-26 under 35 U.S.C.

§103(a)

Claims 2-26 stand rejected under 35 U.S.C. § 103(a) as unpatentable over Filepp (U.S. Patent No. 5,758,072) in view of Platt (U.S. Patent No. 5,421,009). Applicant respectfully traverses the rejection because the cited references, taken alone or in combination, do not teach or suggest the Applicant's claimed invention.
